

PRODUCT GUIDE

TAKUMITAK

TAKUMITAK

THE ART OF SURVIVAL

WHAT DOES TAKUMITAK MEAN?

Takumi is a Japanese word for “artisan”. A master craftsman who has developed his or her skills through many years or decades of experience.

OUR STORY

Takumitak knives are shaped by blade knowledge obtained through 10 years of learning from others. Attending trade shows, conventions, tactical conferences, custom knife shows, shot shows and blade shows. Watching full contact fighting at Combatcon and seeing metal objects being used at unrestricted speed and force. Custom knives and production knives spanning the full range of human capability and material limits.

We take this knowledge, and we match it with a global supply chain that has no limits to modern manufacturing. CNC machines spin, industrial grinders grind, vacuum chambers produce vapor deposition coatings, and people finish the job. We use tried and true industrial manufacturing techniques to cost effectively produce products that have a consistent quality and performs at the level people expect and require.

All Takumitak knives are designed from the ground up. Our focus is on the end user and the wide range of requirements people have for the knife they own. Whether you need your knife for a single task, or a knife to handle any task you may or may not encounter, we hope we designed a knife that suits your needs. If we did not, we will try again in the future.

OEM/ODM

If you designed a knife or have an idea for a knife that you would like to create, we can create it for you.

We offer full service OEM/ODM and can start from an idea or description to create a design for you. If you have a developed knife design in 2D or a CAD file that's ready and you just need a manufacturer, we can do this too.

A woman with long, wavy blonde hair is shown from the waist up, wearing a black long-sleeved crop top and black pants. She is holding a large, silver-bladed knife in her right hand, which is resting on her hip. She is looking off to the side with a serious expression. The background is a blurred, natural setting with trees and foliage.

STEEL SELECTIONS

BLADES

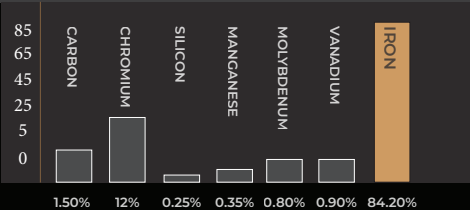

3cr13 Stainless Steel

A popular steel that produces a very functional blade and an edge that is easy to sharpen. The edge will wear down quicker but sharpening in the field is easy and quick. You can have a very sharp edge almost 100% of the time.

D2 Tool Steel

A tool steel that is made for hard use. Takumitak D2 knives can be used in a wide range of heavy duty knife use scenarios in all temperature and climate ranges. D2 is not a stainless steel but it can handle almost any land based knife tasks.

BLADE GRINDS

FULL FLAT GRINDS

are used to create a V-shaped blade. The grind begins at the spine and ends at the edge. The steeper V-shape angle promotes slicing and splitting.

FLAT GRINDS

begin below the spine with a primary bevel, and forms a wider V-shape down to the cutting edge. Flat grinds make splitting easier and is good for hard use.

HOLLOW GRINDS

begin below the spine with a primary bevel, forming a concave shape that thins the blade quickly. A hollow grind stays thin longer and allows you to sharpen the blade while maintaining the blade's edge geometry.

EDGE GRINDS

are used to shape the perfect edge geometry. This depends on blade steel, blade geometry, blade grind, blade thickness and thickness behind the cutting edge.

Cleaver | *Cleavers are shaped to be good at chopping, cutting, and slicing. It's an all around multi-function blade shape which does many tasks with one knife.*

Clip Point | *The curved edge makes cutting and slicing easier while the clip point blade's tip is made for accurate and controlled use.*

Drop Point | *Drop point blades are an ideal all around use knife. It has a strong point for piercing, curved edge for chopping, cutting, slicing, and the location of the lowered tip provides easier controlled use.*

Karambit | *Karambit blades are ideal for slashing, cutting, and hooking. The curved edge is designed to cut while pushing or pulling.*

Spear Point | *Spear point blades are ideal for slashing, cutting, and piercing. The double edge blade is designed to cut both ways.*

Straight Back | *Straight back blades are ideal for cutting and slicing. The curve of the edge offers a longer cutting motion.*

Tanto | *Tanto blades are ideal for forward and downward force. The second edge on the tip of tanto blades are suitable for push cuts.*

Trailing Point | *Trailing point blades are ideal for situations that require a longer working edge. The edge is great for slicing wide objects and making very controlled cuts and slices.*

HANDLE MATERIAL

G10 Strong - Light - Extreme grip performance is maintained in all conditions: scorching heat, freezing cold, dry, and wet

FLAME
